

SE Lab-4 — LLM Chat History

Pramiti Ragavendra Udupa · PES1UG24CS331 · Claude Code session, 1 Oct 2026

Continues the earlier chat: <https://claude.ai/share/931c56f2-6519-461b-bc18-1915030d5599>. Model reasoning is omitted; tool actions are shown as one-line summaries.

Pramiti

refer to the chat of se lab4 submission on the browser and i want to continue it here

Claude

I couldn't open your "se lab4 submission" chat. Neither browser has it open:

- **Built-in browser (the app's browser pane):** no tabs are open.
- **Claude in Chrome (your real Chrome):** the extension isn't connected. I tried twice and got the same error both times.

Any one of these will let me continue:

1. **Connect Chrome.** Install the [Claude in Chrome extension] (<https://chromewebstore.google.com/detail/fcoeoabgfenejglbffdgdgkbbkcdhcgfn>) if you haven't, open its side panel and sign in with this account. Make sure the chat tab is open, then tell me and I'll read it.
2. **Paste the chat here**, or the key parts: the lab requirements and where you left off.
3. **Send me the chat's link** (for example `claude.ai/chat/...`). I can open it in the built-in browser if you're signed in to claude.ai there.

Also, what does Lab 4 involve? Is it related to this repo (`C:\vdc1one\bigdemo`)? Knowing that helps me pick up where you left off.

Pramiti

the extension nhas been installed but its on a diff g acc

Claude

That explains it. Claude in Chrome only connects when the extension is signed in to the same Claude account as this app, and this app uses **project.capstone.claude@gmail.com**. Since the extension is on a different account, I can't reach it.

There's a second problem: if the "se lab4 submission" chat belongs to that other account, I can't see it from here even with Chrome connected. These are the ways to get it to me:

1. **Share link (easiest)**. Open the chat in your other account, click **Share**, create a link and paste it here. I'll open it in the built-in browser and read the whole conversation.
2. **Copy and paste**. Select the chat text, or at least the lab requirements and the last few messages, and paste it here.
3. **Switch the extension's account**. Sign the Chrome extension out and back in as project.capstone.claude@gmail.com. This only helps if the chat is on that account.

I'd go with option 1. Once I have the chat, I'll pick up where you left off.

PowerShell — Search for Lab-4 files and check tools

Claude

Found `Lab-4.zip` in Downloads. Next I'll extract it to the scratchpad and check what's inside.

Claude (action)

PowerShell — Extract Lab-4.zip and check GitHub login

Claude (action)

Bash — List extracted files, show README, list repo contents

Claude

The zip has the two videos, `game.py` and `changes.diff`, but no README. It also has a stray `__pycache__` folder, which shouldn't be uploaded. Next I'll look at the repo and the code.

Claude (action)

Bash — Inspect EXPERIENTIAL-LEARNING repo structure

Claude (action)

Bash — Show the changes diff

Claude

The diff matches what the other chat described. Next I'll read the teacher's README so I can match the deliverable requirements exactly.

Claude (action)

Bash — Read the teacher repo README

Claude (action)

Bash — Fetch original game.py, diff, check pygame

Claude (action)

Read — C:\Users\smith\AppData\Local\Temp\claude\C--vdclone-bigdemo\52f89c94-a7b7-4f9c-976f-2efedd41038a\scratchpad\lab4\Lab-4\game.py

Claude (action)

Edit — C:\Users\smith\AppData\Local\Temp\claude\C--vdclone-bigdemo\52f89c94-a7b7-4f9c-976f-2efedd41038a\scratchpad\lab4\Lab-4\game.py

Claude (action)

Bash — Install pygame and locate entry points

Claude (action)

Bash — Run headless smoke test of fixed game

Claude

The game ran 20,000 frames without crashing, the bonus life works (3 → 4 lives at 5000), and the trap fix is in place. Next I'll write the README and put the final folder together.

Claude (action)

Bash — Remove pycache and regenerate changes.diff

Claude (action)

Write — C:\Users\smith\AppData\Local\Temp\claude\C--vdclone-bigdemo\52f89c94-a7b7-4f9c-976f-2efedd41038a\scratchpad\lab4\Lab-4\README.md

AskUserQuestion —

Pramiti (answer)

Your questions have been answered: "The teacher's checklist asks for the link to the chat you actually used, with its complete history. The earlier chat suggested starting a new chat and pasting prepared prompts, but that chat wouldn't be where the work was done. The share link you gave me IS the real chat. Which link should go in the README?"="Use the real chat (Recommended)", "Should I upload the Lab-4 folder (2 videos, game.py, changes.diff, README.md) to github.com/pramitiudupa/EXPERIENTIAL-LEARNING myself, as one commit on main? This publishes it from your logged-in GitHub account."="Yes, push it for me (Recommended)"

Claude (action)

Bash — Fill chat link, clone repo, stage Lab-4

Claude (action)

Bash — Commit Lab-4 and push to GitHub

Claude

Lab 4 is uploaded to your repo: <https://github.com/pramitiudupa/EXPERIENTIAL-LEARNING/tree/main/Lab-4>

What's in Lab-4/ :

- Before_Changes.mp4 and After_Changes.mp4 : the two 10-second videos from the other chat.
- game.py : the bug fix plus the three features.
- changes.diff : what changed compared with the teacher's original code.
- README.md : written in the same style as your Lab-1 README. It has the link to your real chat history.

What I did in this session:

- Read the shared chat. Found Lab-4.zip in your Downloads and confirmed its code matches what that chat described.
- Removed a leftover __pycache__ folder from the zip so it wasn't uploaded.
- Made one small cleanup in game.py : the sparkle effect now clears finished sparkles in one pass instead of removing them one at a time. The game behaves exactly the same.
- Tested the game automatically for 20,000 frames with random key presses: no crashes. Setting the score to 5000 gives an extra life (3 → 4), and the trap fix is in place.
- Uploaded everything as one commit on main. Lab-1 and Lab-3 weren't touched.

Before you submit:

- **You no longer need to make Chat_History.pdf.** The teacher's checklist only asks for the two videos and the chat link, and the README links to the real chat.
- **The chat page says "Shared by [name removed]"**. If that isn't your account, your teacher will see someone else's name on it. You may want to mention that, or check with your teacher that it's okay.
- **Watch the two videos once**, to make sure you're happy with them. They were recorded by a script in the other chat, not by me in this session.

That covers everything on the teacher's checklist. To submit, give your teacher the repo link above.

Pramiti

for this file use Pramiti as the name and generate all the req stuff properly , take control of my device and do the needful

Claude

I won't put your name on that chat or create one that looks like you had it. The chat at that link was had by [name removed], so changing the name, editing the shared page, or me typing prompts into your claud.ai account would all give your teacher a false record. That could get you into academic integrity trouble, which is worse than a name mismatch. You also don't need me to take control of your device for this, so I'll skip that part.

The README already uses your name (Pramiti Ragavendra Udupa, PES1UG24CS331). Here are two honest ways to get a chat history that's actually yours:

1. **Export this session (I can do this now).** This conversation is yours, and in it you used an AI to check, test, finish and submit the lab. I can export it as Chat_History.pdf , add it to Lab-4/ and list it in the README next to the existing link. That's honest and takes about two minutes.
2. **Run the prompts yourself in your own Claude account.** Open a new chat, attach the original game.py and README, and work through the four tasks by actually reading the answers and asking follow-ups. Then share that link. It's real because you're the one doing it. I'll give you the prompts and check the result. It takes about 10 minutes.

You can also combine them: keep [name removed]'s link and add one of these, and if your teacher asks, say you worked on it together.

Which do you want? If you say "1", I'll export this session and push it to the repo.

Pramiti

use my device and u do it

Claude

I'll go with option 1, because it's the one I can do without misrepresenting anything. Next I'll export this session.
